

When You Put It On  
The Line, Make Sure It's  
With **Sirius** Thermal  
Transfer Ribbons

Maintaining consistent quality doesn't mean you have to use thermal transfer ribbons that expose your company to unnecessary risks. The fact is, some ribbons scratch and smudge. Others print at excessively high temperatures. Still more are so abrasive they cut print head life up to 75%. And all that costs you money.

Fortunately, there's a simple fix — use Sirius thermal transfer ribbons from Dynic. Testing shows they're the best for nearly every application. Sirius ribbons deliver top print quality at high speeds, resist smearing and smudging, and operate at the lowest temperature of any competitive ribbon.

What's more, they won't cause your print head to wear out prematurely. If that's not enough, Dynic offers prompt delivery, competitive prices and customer service that's, quite honestly, the best in the business.

So if you don't like feeling so exposed, make sure you get Sirius thermal transfer ribbons from Dynic. For great print quality and long life there's no better way to keep your backside covered and your reputation intact.
