

SIRIUS

RIBBONS FOR BS5609 & GHS COMPLIANCE

What are BS 5609 and GHS?

- GHS is a global initiative designed to make hazardous chemical labels universally recognized by using a standardized format. This format requires red and black inks be used along with specific hazard pictographs.
- One component of GHS compliance is that the printed label (label and ink combination) being used in maritime environments must withstand a salt water immersion test, also known as the BS5609 standard. Testing is performed by an independent, third-party laboratory.

Label Manufacturer	Label	Dynic Ribbon
Fasson	Primax 1	HL49 red & black
FLEXcon	DRUMcal	HL32 red & black
		HL49 red & black
